Phase 2: Requirement Analysis

Purpose: Convert the project idea into functional requirements that can be configured and verified in ServiceNow.

Functional requirements

ID	Requirement	Source-supported implementation
FR-01	A Standard Laptop item must be available in the Service Catalog.	Service Catalog → Hardware → Standard Laptop.
FR-02	The request must proceed through approval.	The source verifies the Approvers section and approval of the record.
FR-03	An automation must create a Catalog Task after the request is approved.	Flow Designer with Service Catalog trigger and Create Catalog Task action.
FR-04	The task must reference the Requested Item.	Requested Item Record is dragged into Request item.
FR-05	Task short description must be populated.	“Laptop need to Configured”.
FR-06	Task description must be populated.	“Laptop need to Configured”.
FR-07	Task must be assigned to Hardware.	Assignment group = Hardware.
FR-08	The approval value used by the action must be Approved.	Approval field value = Approved.
FR-09	The flow must be attached to the Standard Laptop catalog item.	Maintain Items → Standard Laptop → Process engine → Flow.

Non-functional expectations

- Automation should reduce unnecessary manual intervention.
- The workflow should support timely configuration task generation.
- Task ownership should be clear through the Hardware assignment group.
- The resulting task should be visible for verification from the Requested Item.

Requirement-analysis acceptance points

- Standard Laptop can be ordered.
- Approval can be completed.
- Approved request causes the configured flow to run.
- Catalog Task is created against the Requested Item.
- Short description and description are populated.
- Assignment group is Hardware.
- The final Catalog Task record can be opened and its updated values verified.
