Phase 3: Project Design

Purpose: Design the ServiceNow objects, automation sequence, data flow, and verification path before implementation.

High-level architecture

> User → Service Catalog → Standard Laptop → Approval → Flow Designer → Create Catalog Task → Hardware Assignment → Catalog Task verification

Flow design

Design element	Configured value
Flow name	Standard laptop task
Application	Global
Run user	System user
Trigger	Service Catalog
Action	Create Catalog Task
Request item input	Requested Item Record
Table	Automatically populated as Catalog Task
Short description	Laptop need to Configured
Description	Laptop need to Configured
Assignment group	Hardware
Approval field	Approved

Design of the catalog-item connection

- Open Maintain Items and select Standard Laptop.
- Open Process engine.
- Remove remaining automations, then add the configured Flow.
- Select the flow named Standard Laptop Task.
- Save the catalog item record.

Design verification path

- Open Service Catalog → Hardware → Standard Laptop.
- Use Order Now to place the request.
- Open the order status and Request Number.
- Review the Approvers section and approve the request.
- Open the Requested Item.
- Scroll to Catalog Tasks and open the task to verify status, short description, and assignment group.

Design output

> A complete logical workflow is defined from request initiation through approval, automated task creation, Hardware assignment, and final verification.
