Phase 5: Project Development

Purpose: Implement the designed automation in ServiceNow Flow Designer and connect it to the Standard Laptop service catalog item.

Development Activity 1 – Create the Flow

- Open ServiceNow.
- Select All and search for Flow Designer.
- Open Flow Designer under Process Automation.
- Click New and select Flow.
- Set Flow Name to “Standard laptop task”.
- Set Application to Global.
- Set Run user to “System user”.
- Click Submit.

Development Activity 2 – Configure the Trigger

- Click Add a trigger.
- Search for “Service Catalog”.
- Select the Service Catalog trigger.
- Click Done.

Development Activity 3 – Configure the Action

- Under Actions, click Add an action.
- Search for and select “Create Catalog Task”.
- Set Action to Create Catalog Task.
- Drag and drop the Requested Item Record into Request item.
- Allow the table to populate as Catalog Task.
- Set Short description to “Laptop need to Configured”.
- Add the Description field with value “Laptop need to Configured”.
- Set Assignment group to “Hardware”.
- Set Approval to “Approved”.
- Leave remaining fields at their defaults.
- Click Done.

Development Activity 4 – Save and Activate

- Save the Flow.
- Click Activate.
- Click Activate again when prompted.

Development Activity 5 – Assign the Flow to Standard Laptop

- Open All and search for Maintain Items.
- Select Maintain Items.

- Search the Name field for Standard Laptop and select the record.
- Open Process engine.
- Remove the remaining automations and add Flow.
- Add the flow named “Standard Laptop Task”.
- Save the record.

Development output

The implemented solution is an active Flow Designer workflow connected to the Standard Laptop catalog item, with an approved Service Catalog request triggering creation of a Hardware-assigned Catalog Task.
