Phase 7: Project Documentation

Purpose: Produce a clear record of the project so another student, evaluator, or team member can understand what was built and how it was verified.

Recommended documentation structure

1. Project Title

Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer.

2. Problem Statement

Explain the manual overhead and delays associated with standard laptop requests and configuration.

3. User Story

Describe the IT procurement team member’s need for automatically generated and Hardware-assigned configuration tasks.

4. Project Objectives

List the four objectives: seamless user experience, reduced manual intervention/errors, improved resource utilisation, and improved efficiency/productivity.

5. Requirements

Document the functional requirements and expected outcomes.

6. System Design

Show the request → approval → flow → catalog task → Hardware assignment sequence.

7. Implementation

Document Flow Designer creation, trigger, Create Catalog Task action, field values, activation, and catalog-item flow assignment.

8. Testing

Include test cases, expected results, actual results, and screenshots.

9. Demonstration

Describe the live sequence used during the demo.

10. Conclusion

Summarise how the automation reduces manual overhead and supports timely configuration.

Evidence / screenshot checklist

- Flow Designer – Flow properties showing Standard laptop task, Global, and System user.
- Trigger configuration showing Service Catalog.
- Create Catalog Task action showing Requested Item Record.
- Action fields showing short description, description, Hardware, and Approved.
- Activated flow.
- Maintain Items → Standard Laptop → Process engine showing the assigned flow.
- Service Catalog → Hardware → Standard Laptop.

- Order status and Request Number.
- Approvers section showing approval.
- Requested Item → Catalog Tasks.
- Final Catalog Task showing updated status, short description, and assigned group.

Documentation quality rule

Use screenshots that clearly show the relevant field or record. Keep names and terminology consistent with the configured project. Do not add unsupported technical claims that are not part of the implemented workflow.
