Phase 8: Project Demonstration

Purpose: Demonstrate the complete business flow and prove that the automation works from request to task assignment.

Recommended live demonstration sequence

1. Introduce the problem: standard laptop procurement can involve manual configuration-task handling.
2. State the solution: ServiceNow Flow Designer automates creation and assignment of the configuration task.
3. Open Service Catalog.
4. Navigate to Hardware and select Standard Laptop.
5. Click Order Now and place the request.
6. Open the order status and Request Number.
7. Open the Approvers section and approve the request.
8. Open the Requested Item.
9. Scroll to Catalog Tasks.
10. Open the generated Catalog Task.
11. Show the updated task status/details.
12. Show Short description = “Laptop need to Configured”.
13. Show Assignment group = Hardware.
14. Conclude by explaining that the task was generated automatically after approval, reducing manual intervention.

Suggested presentation flow

Slide	Content
1	Project title and team members
2	Problem statement
3	User story and objectives
4	Current problem vs automated approach
5	System/workflow design
6	Flow Designer configuration
7	Standard Laptop catalog-item flow assignment
8	Request and approval process
9	Generated Catalog Task and Hardware assignment
10	Testing results and screenshots
11	Conclusion and benefits

Demo success criteria

- The presenter can explain the problem and objective in simple terms.
- The Standard Laptop item can be located and ordered.

- The request can be approved.
- The generated Catalog Task can be located.
- The task shows the intended description and Hardware assignment.
- The team can explain how Flow Designer connects the request and task.

Final conclusion

The supplied project demonstrates an automated standard laptop procurement workflow in ServiceNow using Flow Designer. The automation creates a Catalog Task after the Service Catalog request is approved, populates the task with the configuration description, and assigns it to the Hardware group. This directly addresses the project’s stated aim of reducing manual overhead, improving task allocation, supporting timely configuration, and improving the user experience.
